Information Security Policy

1. Passwords and Authentication

Passwords must be at least 14 characters long. Multi-factor authentication is mandatory for all company systems, and hardware security keys are required for production access and for administrators.

Passwords must be stored in the company password manager, Keyhold. Sharing account credentials is prohibited.

2. Devices

Company laptops must have full-disk encryption enabled and must lock automatically after 5 minutes of inactivity. Operating system security patches must be installed within 14 days of release.

Personal devices may access email and chat only through the managed mobile app. Lost or stolen devices must be reported to IT within 1 hour.

3. Data Classification

Corvane uses four data classification levels: Public, Internal, Confidential and Restricted. Customer personal data is classified as Restricted. Restricted data must never be stored on removable media or in personal cloud storage.

4. Reporting Security Incidents

Suspected security incidents must be reported to the Security Operations Center within 1 hour of discovery via the #sec-incidents channel or by email to soc@corvane.example. Phishing emails should be reported with the Report Phish button.

5. Access Reviews

Managers review their team's access rights every quarter. Access for leavers is revoked within 4 hours of their departure.

6. Security Training

All staff and contractors must complete security awareness training within 14 days of joining and annually afterwards.
